To see how features work, let's look at a couple of examples. We can describe the segment [b], for example, as being made up of this set of features. First, [b] is a consonant (meaning it has some obstruction in the vocal tract), so it gets the feature consonant indicated with a plus sign to show that the consonant feature is present. Looking at the next feature, sonorant, notice that it's indicated with a minus sign, meaning that [b] is not a sonorant.

4.3 Phonetic Segments and Features – Essentials of Linguistics

Phonetics is a branch of linguistics that focuses on the production and classification of the world's speech sounds. The production of speech looks at the interaction of different vocal organs, for example the lips, tongue and teeth, to produce particular sounds. By classification of speech, we focus on the sorting of speech sounds into categories which can be seen in what is called the International Phonetic Alphabet (IPA).

Phonetics According to Bruce Hayes (2009), Phonetics is primarily an experimental science, which studies speech sounds from three viewpoints:

- Production (articulatory phonetics): how sounds are made in the human vocal tract
- Acoustic (phonetics): the study of the waveforms by which speech is transmitted through the atmosphere
- Perception (auditory phonetics): how the incoming acoustic signal is processed to detect the sound sequence originally intended by the speaker

The speech ...
