microscopy (see textbook, Figure 9.14).

Chloroplasts are surrounded by an envelope membrane, which sometimes appears to circulate around the main body of the organelle.

Topic 4.4 Leaf Transpiration and Water Vapor Gradients. Transpiration from the leaf depends on two major factors: the difference in water vapor concentration between the leaf air spaces and the the external air and, the diffusional resistance (r) of this pathway. This concept of transpiration is analogous to the flow of
