Fixed prosthodontics is concerned with restoring teeth using restorations that are fixed into the patient's mouth. They are typically made in a laboratory after taking impressions (moulds) for the technician to work with. They are also known as 'indirect restorations'. Indirect restorations can be used to restore and repair single or multiple teeth, and can be used to restore relatively small spaces between the teeth.~~

BSSPD: Fixed Prosthodontics

Fixed prosthodontics are permanent prosthetics used in dental restoration to replace decayed or missing teeth or portions of teeth. Common examples of fixed prosthodontics include inlays, porcelain veneers, crowns, and bridges. They can be made of metal, porcelain, or resin, and may last for five to 15 years.

What Are Fixed Prosthodontics? (with pictures)

Fixed prosthodontics is the area of prosthodontics focused on permanently attached (fixed) dental prostheses. Such dental restorations, also referred to as indirect restorations, include crowns, bridges (fixed dentures), inlays, onlays, and veneers. Prosthodontists are specialist dentists who have undertaken training recognized by academic institutions in this field.

RESULTS: High-speed handpieces were the instruments of choice for tooth preparation in fixed prosthodontics. In operative procedures, recommendations for sole use of the high-speed, the low-speed, or both handpiece types were more uniform. CONCLUSIONS: North American dental schools advocate greater use of high-speed than low-speed handpieces.
