1.1 Lagrangian Mechanics. Newton's second law of motion
states that for a body of constant mass acted on by a force
 $F = \frac{d}{dt}(p) = m\ddot{x}$ (1.1) where p is the linear momentum ($p = m\dot{x}$), x is the position of the body and $\dot{x} = \frac{dx}{dt}$. Hence if $F = 0$
then the linear momentum is conserved $\dot{p} = 0$.~~

irreversibility, the role of information in physics – all these are examples of questions about which science is still confused and whose solution may well demand more than skilled mathematics and new experiments. Foundations of Physics is a privileged forum for discussing such foundational issues, open to physicists, cosmologists, philosophers and mathematicians.

The mathematical physics group is concerned with problems
in statistical mechanics, atomic and molecular physics,
quantum field theory, and, in general, with the mathematical
foundations of theoretical physics. This includes such
subjects as quantum mechanics (both nonrelativistic and
relativistic), atomic and molecular physics, disorder effects in
condensed matter, the existence and properties of the phases
of model ferromagnets, the stability of matter, the theory of
