High-speed networks now dominate both the wide-area network (WAN) and local area network (LAN) markets. In the WAN market, two related trends have appeared. Public and private data networks have evolved from packet switching networks in the 10s and 100s of kbps, to frame relay networks operating at up to 2 Mbps, and now to asynchronous transfer mode (ATM networks operating at 155 Mbps or more.

Wired networks use Ethernet cable to connect the computers to the network. This makes wired networks less expensive, faster, and more secure than wireless networks. All the computers on a wired network can access the Internet through a single router or gateway, but the requirement for Ethernet connections limit the flexibility of a wired network.
