Summarized the heavy metal pollution caused by natural and human activities. The natural causes include the migration and redistribution of soil debris and the hydraulic migration of soil parent rock with high background value under the action of wind; human factors include mining, abandoned mining areas, fertilizer and pesticide application, and sewage irrigation.

While some pollution occurs through natural events such as volcanic eruptions and forest fires, most of the pollution in the world is caused by human activities. History of Pollution. The issue of pollution is as old as human civilization. In medieval times, air pollution was caused by open fires in caves.

What Is Pollution? - WorldAtlas

Unlike organic pollutants, heavy metals once introduced into the environment cannot be biodegraded. They persist indefinitely and cause pollution of air, water, and soils. Thus, the main strategies of pollution control are to reduce the bioavailability, mobility, and toxicity of metals.
