graduate textbook on numerical linear
algebra in 1997. Our aims in this book
are beauty, depth of insight, and
brevity. The text is split into forty
lectures, each about eight pages long.
It is based on the course I taught
repeatedly at MIT and Cornell during
1984-1997.

This course builds on elementary linear algebra and in it we derive, describe and analyse a number of widely used constructive methods (algorithms) for various problems involving matrices. Numerical Methods for solving linear systems of equations, computing eigenvalues and singular values and various related problems involving matrices are the main focus of this course.
