report the type of faults which lead to pantograph damage and possible de wirement incidents.

## ~~Unattended Pantograph Monitoring Systems~~

The Pantograph Condition Monitoring System (PCMS) is installed above the railway to automatically scan the condition of pantographs as they pass underneath. The process occurs without any contact between the system and the rollingstock itself: as the vehicle passes through the scan location, the system assesses wear on the pantograph head, and scans for any chips or damaged areas.

Internal or external factors affect the dynamic behavior of the system and lead to parameter variations. A pantograph in “non-standard conditions” might adversely affects the contact line or that requires a specific maintenance activities. A complete inspection of each of its parts is needed to perform data correlation.
