Description of

dissipation in quantum
mechanics In classical
physics damping may

often be described by
introducing a velocity
proportional term in the
equation of motion. For
a damped harmonic

oscillator with mass M
and frequency ω_0 one
has $M \ddot{q} + 2\gamma \dot{q} + \omega_0^2 q = 0$;
(4.1) where q is the
position of the oscillator

Systems

The dissipative two-level system is a particular realization of the Caldeira–Leggett model that deserves special attention due to its interest in the field of quantum computation. The aim of the model is to study the effects of
