formulations of quantum mechanics are those mathematical formalisms that permit a rigorous description of quantum mechanics. This mathematical formalism uses mainly a part of functional analysis, especially Hilbert space which is a kind of linear space. Such are distinguished from mathematical formalisms

Referring to Euler ' s  
formula, the function  
 $e^{iq}$  is a periodic function  
of  $q$  with a period of  $2\pi$ ,  
that is:  $e^{i(q+2\pi)}=e^{iq}$ . This  
can be readily proven  
since:  $e^{i(q+2\pi)}=\cos(q+2\pi)+i\sin(q+2\pi)=\cos q$

$\psi = e^{iq}$ . Given that observation, we can always assume that  $q$  has a value between 0 and  $2\pi$ .

Quantum Mechanics  
For better understanding  
of molecular symmetry  
you indeed need some  
mathematics, namely,  
some basics of group  
theory, but aside from  
that I doubt that you  
need some mathematics  
apart from arithmetic  
and calculus for general,  
inorganic, organic, and  
even physical chemistry.

For quantum mechanics you absolutely need to familiarize yourself with the concept of complex numbers and you have to learn some basic approaches for solving differential equations.
