3 Best Binoculars for Stargazing (2020) | The Drive

When you're new to stargazing, the first step seems obvious: buy a new telescope. But what will serve you just as well is a good pair of binoculars for astronomy. Binoculars bring the stars a bit closer to your eyes, with a larger field of view that makes the heavens a bit easier to understand.

How to Choose Binoculars for Astronomy | Sky & Telescope -

2. Start with a small, easy-to-use size. Don't buy a huge pair of binoculars to start with! Unless you mount them on a tripod, they'll shake and make your view of the heavens shaky, too.

Top tips for binocular stargazing | Astronomy Essentials -

The best size binoculars for astronomy will be those which offer a compromise of performance and size. Popular sizes include 7 x 50, 10 x 50, or even 8 x 42. Any larger and you will need something to stabilize the image, any smaller and the binoculars won't let enough light in for a good view of celestial objects.

Best Binoculars For Astronomy And Stargazing | Buying Guide

The minimum interpupillary distance of 52mm makes these binoculars suitable for people with small faces or close-set eyes. Verdict Optically and mechanically very good, these binoculars will suit a wide range of people; For Sharp image, locking focus; Against Narrow FOV; ill-fitting, untethered lens caps; Price £159; Weight 1,060g
