These guidelines address tandem mooring and cargo transfer operations of crude oil and other petroleum products between Floating (Production) Storage and Offloading facilities (F (P)SOs) and Conventional Tankers (CTs). F (P)SOs are increasingly being designed to accommodate CTs, as this permits increased flexibility in trading patterns for CTs and optimises field export freight economics without requiring dedicated or specialised shuttle tankers.

Tandem mooring of two vessels is a proven system and is very safe and reliable in harsh weather conditions. Typically the operational limits exceed sea states with 5.5 m significant wave heights. The LNG transfer includes large bore aerial type composite hoses for LNG and vapour return. Per hose upto 5,000 m<sup>3</sup> LNG per hour can be transferred.
