Page layouts, the point-and-click tool that allows application developers to organize fields, buttons, and related lists on record detail pages, do not provide much flexibility in how sets of information are displayed. Fields must always appear above related lists, buttons must always appear above fields, and s-controls and custom links can only be placed in particular areas.

Understanding Security. The powerful combination of Apex and Visualforce pages allow Lightning Platform developers to provide custom functionality and business logic to Salesforce or create a completely new stand-alone product running inside the Lightning Platform. However, as with any programming language, developers must be cognizant of potential security-related pitfalls.

Visual Force. Visual Force is a framework that allows developers to build sophisticated, custom user interfaces that can be hosted natively on the Force.com platform. The Visual Force framework includes a tag-based markup language, similar to HTML. In the Visual Force markup language, each Visual Force tag corresponds to a coarse or fine-grained user interface component, such as a section of a page, a related list, or a field.
